ITEM

- 18a. Give: (1) the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method; (2) the details of subsequent stages of selection and multiplication; (3) evidence of uniformity and stability; and (4) the type and frequency of variants during reproduction and multiplication and state how these variants may be identified
- 18b. Give a summary of the variety's distinctness. Clearly state how this application variety may be distinguished from all other varieties in the same crop. If the new variety is most similar to one variety or a group of related varieties:
- (1) identify these varieties and state all differences objectively;
 - (2) attach statistical data for characters expressed numerically and demonstrate that these are clear differences; and
 - (3) submit, if helpful, seed and plant specimens or photographs (prints) of seed and plant comparisons which clearly indicate distinctness
- 18c. Exhibit C forms are available from the PVPO Office for most crops; specify crop kind. Fill in Exhibit C (Objective Description of Variety) form as completely as possible to describe your variety.
- 18d. Optional additional characteristics and/or photographs. Describe any additional characteristics that cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the characteristics that are difficult to describe, such as plant habit, plant color, disease resistance, etc.
- 18e. Section 52(5) of the Act requires applicants to furnish a statement of the basis of the applicant's ownership. An Exhibit E form is available from the PVPO.
19. If "Yes" is specified (seed of this variety be sold by variety name only, as a class of certified seed), the applicant MAY NOT reverse this affirmative decision after the variety has been sold and so labeled, the decision published, or the certificate issued. However, if "No" has been specified, the applicant may change the choice. (See Regulations and Rules of Practice, Section 97.103).
22. See Sections 41, 42, and 43 of the Act and Section 97.5 of the regulations for eligibility requirements.
23. See Section 5.5 of the Act for instructions on claiming the benefit of an earlier filing date.

22. CONTINUED FROM FRONT (Please provide the date of first sale, disposition, transfer, or use for each country and the circumstances, if the variety (including any harvested material) or a hybrid produced from this variety has been sold, disposed of, transferred, or used in the U.S. or other countries.)

USA - Released as a named cultivar, March 31, 1999.

23. CONTINUED FROM FRONT (Please give the country, date of filing or issuance, and assigned reference number, if the variety or any component of the variety is protected by intellectual property right (Plant Breeder's Right or Patent).)

'Grandin' wheat is a component of this variety and received Plant Breeders Rights protection in Canada - certificate No. 0046 on August 25, 1993 by the North Dakota Agricultural Experiment Station.

NOTES: It is the responsibility of the applicant/owner to keep the PVPO informed of any changes of address or change of ownership or assignment or owner's representative during the life of the application/certificate. There is no charge for filing a change of address. The fee for filing a change of ownership or assignment or any modification of owner's name is specified in Section 97.175 of the regulations. (See Section 101 of the Act, and Sections 97.130, 97.131, 97.175(h) of the Regulations and Rules of Practice.)

To avoid conflict with other variety names in use, the applicant must check the variety names proposed by contacting: Seed Branch, AMS, USDA, Room 213, Building 306, Beltsville Agricultural Research Center-East, Beltsville, MD 20705. Telephone: (301) 504-8089.

Exhibit A - Origin and Breeding History 'Reeder' Wheat

Fall 1991	Original cross made at North Dakota State University (NDSU) greenhouse. Pedigree - IAS20*4/H567.71//Stoa/3/ND674 IAS20*4/H567.71 is a public breeding line received from CIMMYT, Mexico. ND674 is a public breeding line derived from the cross Grandin*2/Glupro.
Spring 1992	F ₁ plants, NDSU greenhouse.
Summer 1992	F ₂ plants, spaced plant nursery, NDSU research land.
Winter 1992-1993	F ₃ head row, Arizona.
Summer 1993	F ₄ head row (F ₃ - derived), NDSU research land.
Winter 1993-1994	F ₅ head row (F ₄ - derived), Arizona.
Summer 1994	F ₆ preliminary yield trial, 2 locations, NDSU research land.
Winter 1994-1995	F ₇ seed increase rows (5), Arizona.
Summer 1995	F ₈ elite yield trial, 3 locations, NDSU research land. Seed increase (50 lbs), Casselton, ND
Summer 1996	Seed increase (141 lbs), Casselton, ND
Summer 1996-1998	North Dakota HRS wheat variety trial, 7 locations each year. Experimental line designation - ND695. Uniform Regional HRS Wheat Nursery, about 20 locations each year, Upper Midwest, USA.
Summer 1997-1998	Seed increase, Seedstocks Project, NDSU.
March 31, 1999	ND695 released as a named cultivar, 'Reeder'.

Observations indicate Reeder is uniform and stable within commercially acceptable limits for all traits as described in Exhibit C. Uniformity and stability of Reeder were observed 1994 - 1998 for five generations (F₆ - F₁₁). Variants (taller plants, 6-12 cm) occurrence at a frequency of 14/10,000 and awnless plant variants at a trace frequency of less than 1/10,000.

Selection criteria for the breeding of Reeder wheat were highly heritable traits (i.e. plant height, maturity, disease resistance, daylength response) in the early segregating generations, F_2 - F_5 . Beginning in the F_6 generation, selection criteria also included lodging resistance, shattering resistance, test weight, grain yield and breadmaking characters (grain protein, milling extraction, dough mixing, loaf volume, external and internal loaf appearance). Data were obtained from multiple locations and over years to evaluate and identify the experimental line ND695 that was named Reeder. Overall, the selection criteria were a combination of traits used to identify a superior hard red spring wheat genotype adapted to North Dakota wheat production, and a genotype having acceptable (compared to check cultivars) milling and breadmaking properties for domestic and export markets.

EXHIBIT B - Statement of Distinctness

To my knowledge 'Reeder' most nearly resembles 'Grandin' and 'Gus'. Differences include but are not necessarily restricted to the following:

1. Reeder differs from Grandin and Gus for gel electrophoresis pattern (PAGE) shown in a computer generated image (Figure 1). An arrow (A) indicates a two band difference.
2. Reeder is photoperiod insensitive (daylength neutral) and Gus is photoperiod sensitive.
